

Android Email Configuration

This guide explains how to configure your Android device to access your email account. This tutorial was created running the Android 6 OS. If you are using different hardware or a different OS version, these instructions may differ.

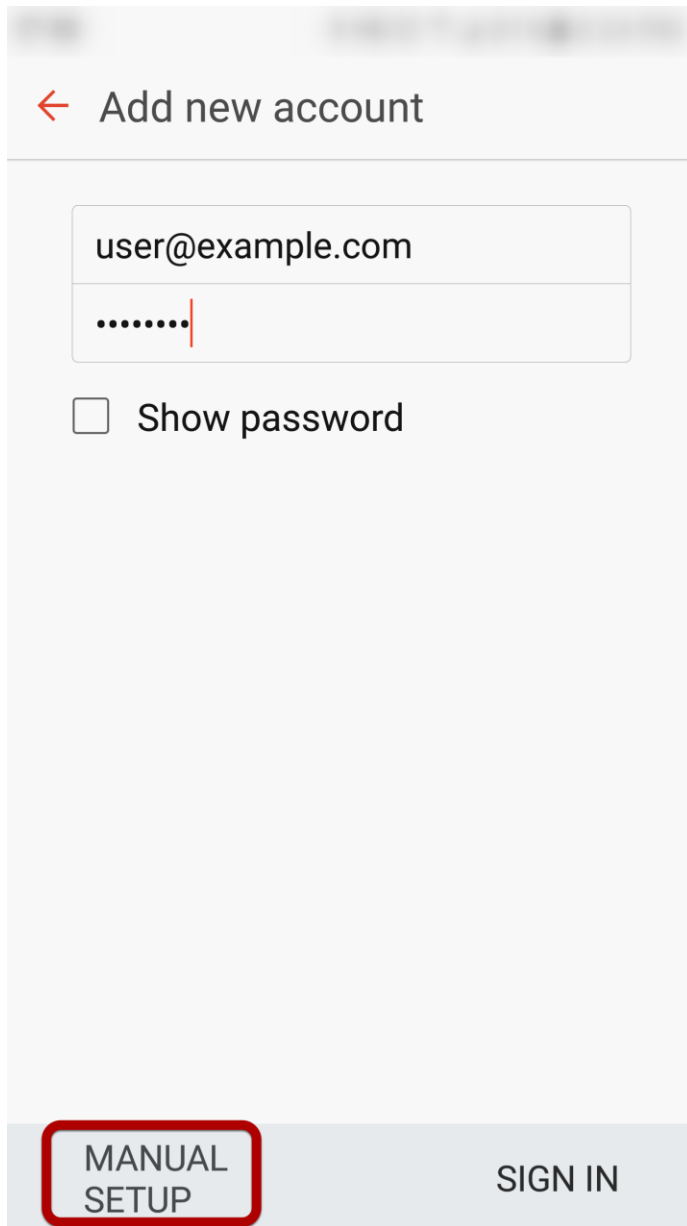

How do I find my email cluster?

In order to setup your email client, you will need to know which email cluster your account is hosted on. If you don't know this information, you can check with your email service provider, or try logging into webmail at:

<http://mail.b.hostedemail.com>

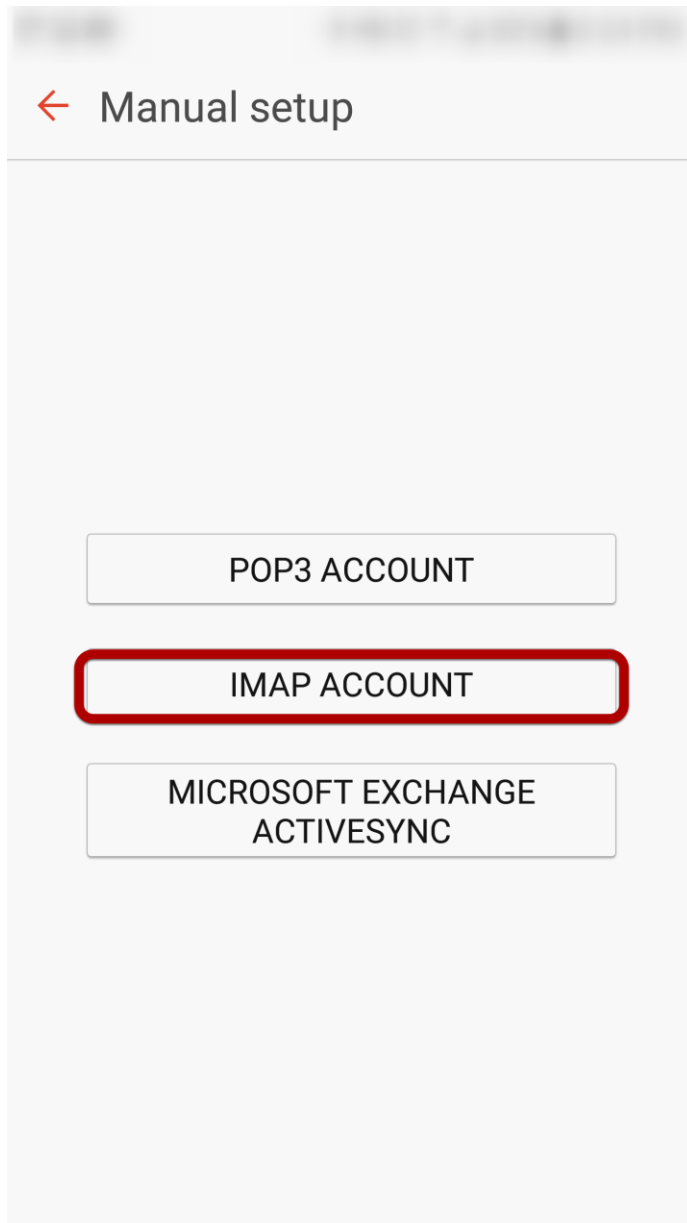

If you are able to successfully login to the webmail interface, then you have found your mail cluster. If you are not able to login to either cluster, please contact your email service provider for support.

Step 1: Open the Email application

Enter your email address and select **Manual Setup**

Step 2: Select account type

Select **IMAP Account**

Step 3: Enter Incoming Account Settings

← Manual setup

Account

Email address
user@example.com

User name
user@example.com

Password
.....

Show password

Incoming server

IMAP server
mail.hostedemail.com

Security type
SSL ▼

Port
993

SIGN IN
